```
service/
repository/
```

S Backend Veri Akışı

```
HTTP Request → Controller → Service → Repository → Database

↓

DTO/Response ← Service ← Repository ← Database
```

B FRONTEND MİMARİ (React)

Klasör Yapısı

```
frontend/
public/
 index.html
      — favicon.ico
   ---- manifest.json
 --- src/
     — 📁 components/ # Tekrar kullanılabilir bileşenler
    common/
      ---- Header.jsx
      ---- Sidebar.jsx
      ---- Loading.jsx
        ---- ErrorMessage.jsx
       ─ forms/
         LoginForm.jsx
         RegisterForm.jsx
         — ProfileForm.jsx
       — BarChart.jsx
         — LineChart.jsx
        --- PieChart.jsx
       — I tables/
      ---- DataTable.jsx
      CreditHistory.jsx
      − 📁 pages/ # Ana sayfalar
       — 📁 auth/
          LoginPage.jsx
```

S Frontend Veri Akışı

```
User Action → Component → Service (API Call) → Backend

↓

State Update ← Component ← API Response ← Backend
```

VERITABANI MIMARI

Tablo İlişkileri

```
Users (1) \leftrightarrow (1) UserCredits
Users (1) \leftrightarrow (N) UploadedFiles
Users (1) \leftrightarrow (N) AlRequests
Users (1) \leftrightarrow (N) Payments
Users (1) \leftrightarrow (N) CreditTransactions

UploadedFiles (1) \leftrightarrow (N) ColumnMappings
UploadedFiles (1) \leftrightarrow (N) AlRequests

AlRequests (1) \leftrightarrow (N) AlResults
```

Database Yapısı

```
database/
|----- | migrations/
| |------ V1__initial_schema.sql
| |------ V2__add_indexes.sql
```

DOCKER MİMARİ

Docker Yapısı

```
docker/

Dockerfile.backend # Spring Boot image

Dockerfile.frontend # React build image

nginx.conf # Frontend için Nginx

init.sql # Database başlangıç scripti
```

⊘ Servis İletişimi

∳ API MİMARİ

API Endpoint Yapısı

```
POST /login
    — POST /refresh
—— /users/
 GET /profile
 PUT /profile
   ---- GET /credits
files/
POST /upload
GET /list
 DELETE /{id}
 POST /{id}/parse
—— /ai/
POST /analyze
 GET /requests
 GET /results/{id}
  — /payments/
 POST /create
 GET /history
 —— /admin/
 GET /users
 GET /analytics
 POST /credits/adjust
```

Authentication Flow

- 1. User Login → JWT Token
- 2. Token in Header: Authorization: Bearer {token}
- 3. Backend validates JWT
- 4. Access granted/denied

7 DEPLOYMENT MİMARİ

Cloud Architecture

TEKNİK STACK DETAYI

Backend Stack

```
java

// Spring Boot Dependencies
- Spring Boot Web (REST API)
- Spring Security (Authentication)
- Spring Data JPA (Database)
- PostgreSQL Driver
- JWT Library
- Apache POI (Excel)
- PDFBox (PDF)
- OpenAl Java Client
```

Frontend Stack

javascript			

```
// React Dependencies

- React 18+

- React Router Dom

- Axios (API calls)

- Chart.js (Grafikler)

- React Hook Form (Forms)

- Tailwind CSS (Styling)

- React Query (Data fetching)
```

Database

sql
-- PostgreSQL 15+
-- Tables: 8 ana tablo
-- Indexes: Performance için
-- Migrations: Flyway ile

DEVELOPMENT WORKFLOW

Git Workflow

main branch (production)

—— develop branch (staging)

—— feature/user-auth

—— feature/file-upload

—— feature/ai-integration

—— feature/admin-panel

Testing Strategy

Backend: Unit Tests (JUnit) Integration Tests API Tests (Postman)		
Frontend: Component Tests (Jest) E2E Tests (Cypress) Visual Tests		

Bu mimari ile projenizi step-by-step geliştirebilirsiniz. Hangi kısmını daha detaylandırmak istiyorsunuz?

- 🔧 Backend Service katmanı nasıl çalışacak?
- React Component yapısı nasıl olacak?
- **B** Database ilişkileri nasıl kurulacak?
- **Docker** setup nasıl yapılacak?
